

## CLAIMS:

What is claimed is:

1. A method of processing a received message, the method comprising:  
2 receiving a message expressed in a non-negotiated language;  
3 recognizing to what extent the message is capable of being discerned; and  
4 processing the message, to the extent the message can be discerned.
2. The method of Claim 1, further comprising the step of: disregarding the message to  
the extent the message is not capable of being discerned.
3. The method of Claim 1, wherein the message comprises: a start tag and an end tag.
4. The method of Claim 3, wherein the message further comprises data encapsulated  
between said start and end tag.
5. The method of Claim 1, wherein said step of processing the message, comprises  
2 executing an instruction associated with the message.

6. A method of processing received messages, the method comprising:

receiving messages in a non-negotiated language;

parsing said messages to determine if said messages are decipherable; and

processing those messages determined to be decipherable.

7. The method of Claim 6, further comprising the step of: disregarding any messages not decipherable.

8. The method of Claim 6, wherein the step of processing comprises executing an instruction associated with at least one of said comprehended messages.

9. The method of Claim 6, wherein the step of processing comprises storing data associated with at least one of said comprehended messages.

10. The method of Claim 6, wherein said comprehended messages are written in a human readable text language.

11. The method of Claim 8, wherein said executing an instruction comprises displaying information associated with at least one of said deciphered messages.

12. The method of Claim 6, wherein at least one of the messages comprises a start tag,  
2 an end tag and data encapsulated between said tags.

13. The method of Claim 6, wherein at least one of the messages is written in an  
2 Extensible Markup Language.

14. A system for receiving at least one message expressed in a non-negotiated language, comprising:

a tag recognizer configured to determine to what extent the message can be processed by analyzing tags in the message; and

a controller configured to process the message based on the determination of the tag recognizer and to disregard an unrecognized message.

15. The system of Claim 14, wherein the message is a readable text language.

16. The system of Claim 14, wherein at least one message includes a start tag and an end tag.

17. The system of Claim 14, wherein said system is a personal digital assistant (PDA) for receiving the message in a wireless environment whereby no fixed handshaking protocol is used to receive the message.

18. The system of Claim 17, wherein said PDA displays information to a user to the extent the message is discerned by said parser.

19. The system of Claim 14, wherein the message is written in an Extensible Text Markup Language.
